

# Advanced Sustainable Biofuels for Aviation

Industrial production of sustainable aviation fuels  
Long term research & development strategy  
Fuel logistics  
Market uptake  
Sustainability

BIO4A is a Horizon 2020 project that will scale up the industrial production and the market uptake of sustainable aviation fuel, made from residual lipids.

It will enable the large-scale pre-commercial production of ASTM-certified sustainable aviation fuel in the EU.

It will also investigate the alternative supply of sustainable feedstocks by recovering EU MED marginal land for drought resistant crop production.

Bio4A will test the entire value chain and logistic at industrial scale, assessing the environmental performance of the overall process.

European Commission  
Joint Research Centre

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 789562.
